

GET – Setup and Edit Asset Types, Definitions & Models

When setting up any Implement it is important to give the correct Type, Definition and Model. These allow the system to filter assets correctly.

The fields are found on the Asset Setup Screen as shown below.

3. Implement Definition

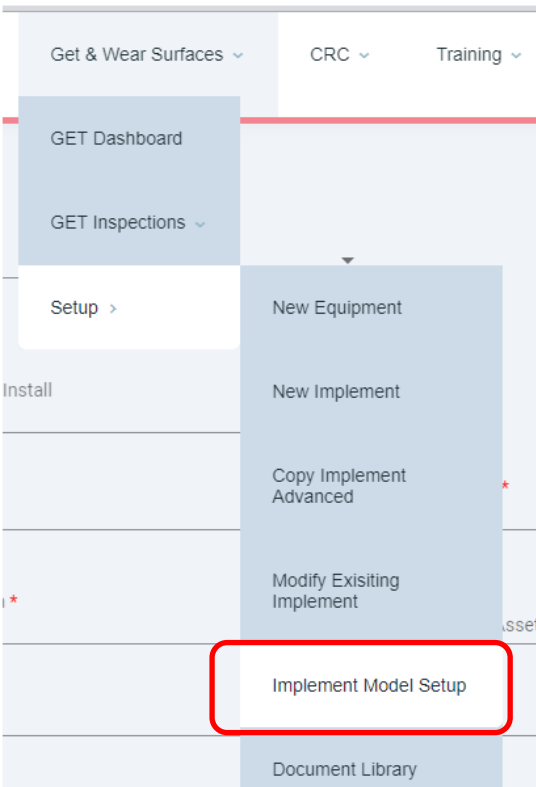

Select Asset Type: Bucket
 Select Asset Definition *: 9B
 Select Asset Model: D13, D14, D14

4. Implement Details

Select Implement *: OKJBBucket02
 Additional Serial #

5. Implement Budget

If you are unable to select the correct asset type, please contact help@tracktreads.com and one of the team will set this up for you. However, to setup a new definition or asset model please navigate to the screen – Implement Model Setup.
